AI ML Projects

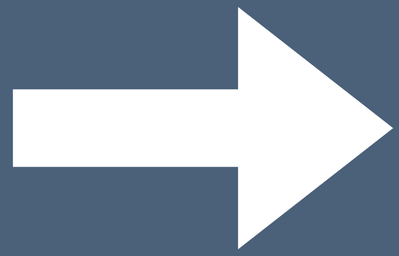
Supervised & Unsupervised

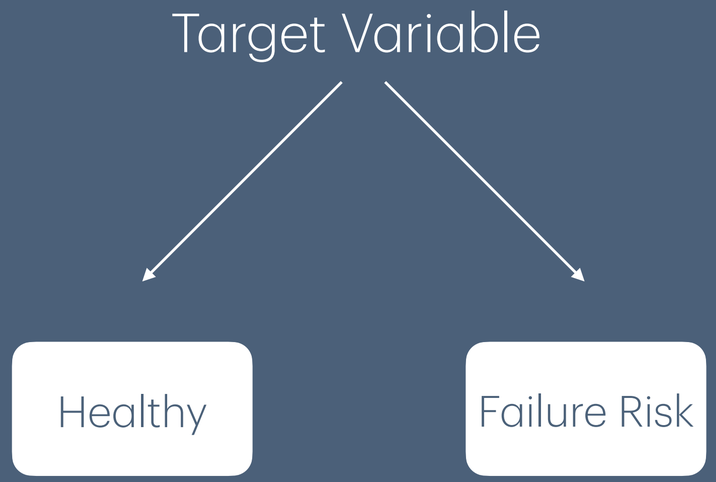
Project 1: Supervised Machine learning

Supervised Machine Learning

Problem Statement

Unexpected equipment failures lead to costly downtimes. Predicting failures before they occur allows proactive maintenance.





Binary Classification

Methodology Used

CRISP - DM : Cross Industry Standard Process for Data Mining

It Starts from Business Understanding to Model Deployment

Step By Step Process

Inspired by CRISP-DM

Data Extraction	Web Data, CSV, Excel Sheet etc...
Data Analysis	Pattern & Trend Analysis
Feature Engineering	Handling Missing Values, Unknowns etc ...
Model Building	Model Building based on use case
Model Evaluation	Model Performance Metrics like RMSE,MSE etc...

Python Use Cases

NumPy

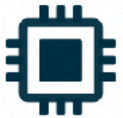
A fundamental package to manipulate arrays

NumPy

The fundamental package for scientific computing with Python

LATEST RELEASE: NUMPY 2.3. VIEW ALL RELEASES

Quantum Computing



QuTiP
PyQuil
Qiskit
PennyLane

Statistical Computing

Pandas
statsmodels
Xarray
Seaborn

Signal Processing

SciPy
PyWavelets
python-control
HyperSpy

Image Processing

Scikit-image
OpenCV
Mahotas

Graphs and Networks

NetworkX
graph-tool
igraph
PyGSP

Astronomy

AstroPy
SunPy
SpacePy

Cognitive Psychology

PsychoPy

Bioinformatics

BioPython
Scikit-Bio
PyEnsembl
ETE

Bayesian Inference

PyStan
PyMC
ArviZ
emcee

Mathematical Analysis

SciPy
SymPy
cvxpy
FEniCS

Chemistry

Cantera
MDAnalysis
RDKit
PyBaMM

Geoscience

Pangeo
Simpeg
ObsPy
Fatiando a Terra

Geographic Processing

```

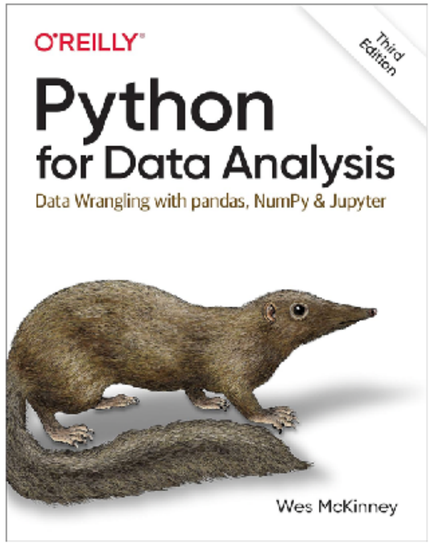
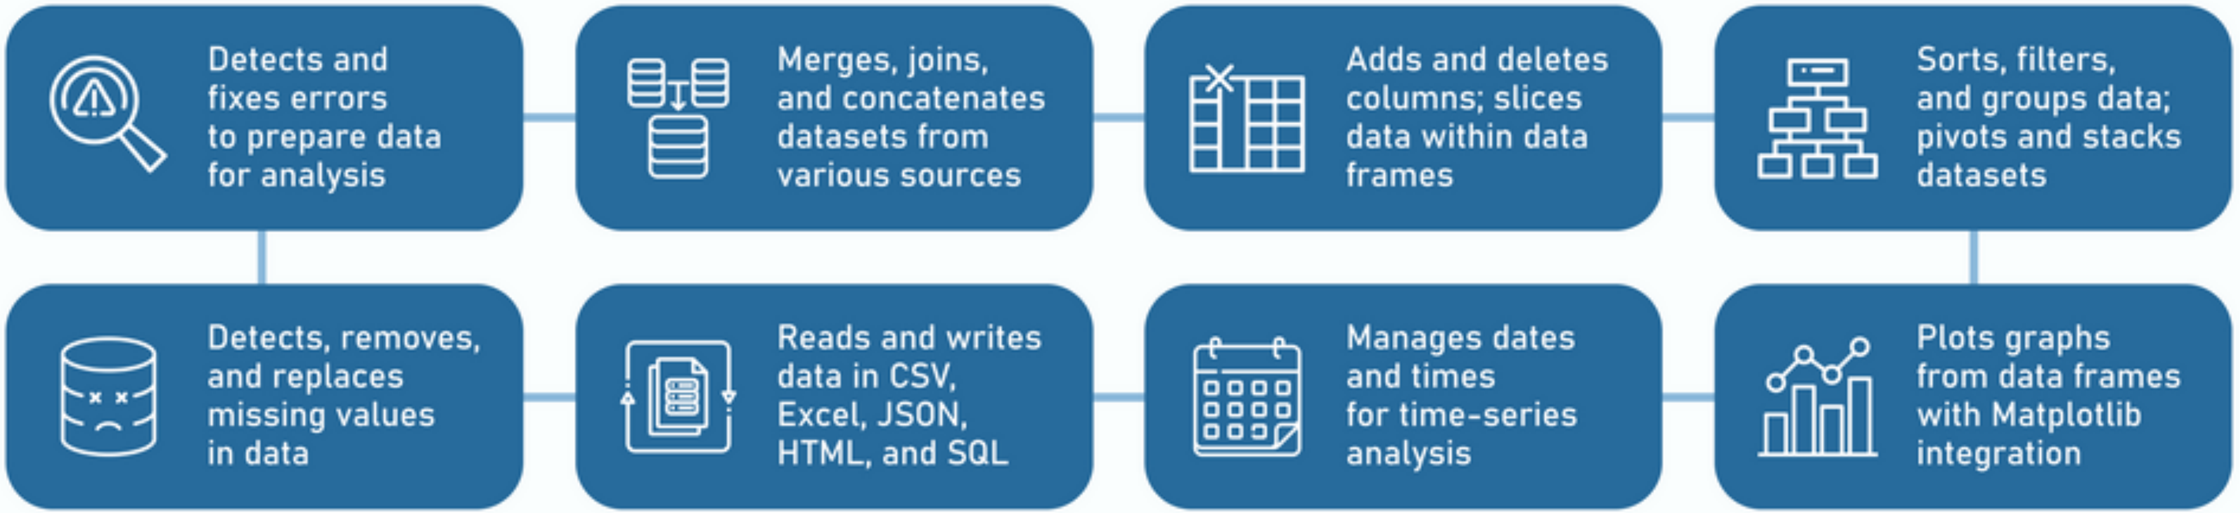
Pandas

Pandas is a fast, powerful, flexible and easy to use open source **data analysis and manipulation tool**, built on top of the Python programming language.



PANDAS MAIN CAPABILITIES



altexsoft

Pandas

Series

pd.Series

pd.Series(data, index)

Creation of Series

Arithematic operations

Data Frame

pd.DataFrame

pd.DataFrame(data, index, columns)

pd.read_csv('file_path')

df.head()

df.tail()

df.describe()

df.info()

Create/drop the columns

iloc and loc

Conditional Filtering

pd.DataFrame(Conditional)

df[df['column_name'] <= 'value']

Multiple columns filtering -

And(&) Or (|)

df.isin()

GroupBy Operations

df.groupby()

Evaluation Metrics

$$Accuracy = \frac{TP + TN}{TP + TN + FP + FN}$$

$$Precision = \frac{TP}{TP + FP}$$

$$Recall = \frac{TP}{TP + FN}$$

$$F_1 = 2 \cdot \frac{Precision \cdot Recall}{Precision + Recall}$$

Project 2: Un-supervised Machine learning
